

02 Control Structures

干汝宣

1. 条件语句

• if 判断:

```
if [condition1] :  
    bit of code  
elif [condition2] :  
    bit of code  
else :  
    bit of code
```

如果condition1满足，则不会判断condition2

2. write function

```
def func(x,y):          # function signature  
    z = x*y  
    print(z)           # function body
```

函数内的变化对外界不可见，此例中z的取值在函数外不变

3. loops

• for 循环

```
for i in range(a,b):    # b是截止位，即不会运行b  
    bit of code
```

continue: 结束当前循环节，进行下一个循环

break: 结束所有循环

pass: 占位符，无意义

- **while 循环**

```
while [condition]:  
    do whatever
```

4. function
